

DISTRIBUTION CENTERS

What makes us different than other vendors? Unlike our competitors who make the client pay for the system in full, we don't require capital expense upfront. We do not charge for the microgrid system which is more comprehensive than just solar and/or solar with a battery. Our microgrid system can tie into existing emergency generators to monitor and enhance their operation. If a building energy management system is not in place, we can provide that as well. If there is one, we incorporate it into our microgrid. We are a way to consolidate all the various independently operating parts into one elegant solution. Also, our microgrid offers the added benefit of setting up your company for success in EV truck charging if desired. No other vendor has the mix of products that SMG offers.
